From dirt bikes and jet skis to weed wackers and snowblowers, machines powered by small gas engines have become a permanent—and loud—fixture in American culture. But fifty years of high-speed fun and pristine lawns have not come without cost. In the first comprehensive history of the small-bore engine and the technology it powers, Paul R. Josephson explores the political, environmental, and public health issues surrounding one of America's most dangerous pastimes. Each chapter tells the story of an ecosystem within the United States and the devices that wreak havoc on

it—personal watercraft (PWCs) on inland lakes and rivers; all-terrain vehicles (ATVs) in deserts and forests; lawn mowers and leaf blowers in suburbia. In addition to environmental impacts, Josephson discusses the development and promotion of these technologies, the legal and regulatory efforts made to improve their safety and environmental soundness, and the role of owners' clubs in encouraging responsible operation. Synthesizing information from medical journals, recent environmental research, nongovernmental organizations, and manufacturers, Josephson's compelling history leads to one irrefutable conclusion: these machines cannot be operated without loss of life and loss of habitat.

Ten essays discuss federal democracy, the form of government of the United States. The first essay discusses the origins of American federalism. The second examines why we have a federal system, the functions federalism serves, and the consequences of federalism for the American political system. Federalism in the Constitution and constitutional law are treated in the third essay. The

importance of cultural pluralism in American life and the role of American federalism in supporting pluralism are the foci of the fourth essay. The roles that the local community, the states, and political parties play in the federal system are examined in essays 5, 6, and 7, respectively. State, local, and professional roles in citizenship education are discussed in the eighth essay. The ninth essay explores how high school U.S. history and government textbooks approach federalism. The concluding essay describes resources on federalism that can be used in curriculum development at the secondary and college levels. Many of the essays are followed by topics for further study and suggested readings for teachers. (RM)

Grazier and Cass's exploration of how technology, science, and scientists are portrayed in Hollywood productions. Both big and small-screen productions are featured and their science content illuminated—first by the authors and subsequently by a range of experts from science and the film world. Starring roles in this volume are played by, among other things, computers (human and mechanical), artificial intelligences, robots, and spacecraft. Interviews with writers, producers, and directors of acclaimed science-themed films stand side by side with the perspectives of scientists, science fiction authors, and science advisors. The result is a stimulating and informative reading experience for the layperson and professional scientist or engineer alike. The book begins with a foreword by Zack Stentz, who co-wrote X-

Become the greatest problem solver you can be! Bad problem solving costs individuals and society incalculable amounts of time, money, and sanity. In this book Nat Greene—who's been solving hard problems professionally for over twenty years—shares nine behaviors anyone can adopt to find solutions to even the most seemingly intractable

problems. The problem with most problem solving, Greene says, is that it's not problem solving at all: it's guessing. We have an idea of what might work and we try it out. If that doesn't work, we try something else. And so on. It's inefficient at best, and with really hard problems there are simply too many variables for guessing to work. Greene shows you how to adopt the behaviors great problem solvers use to arrive at solutions efficiently—without guessing. He illustrates them with examples ranging from everyday issues like fixing a malfunctioning garage door to stopping frequent breakdowns at a chemical plant (saving millions of dollars) to addressing the scourge of poverty in sub-Saharan Africa. So stop guessing and start solving today!
