Are you looking for an engaging, decision-focussed approach to financial reporting that encourages students to develop their interpretative skills? Building on the success of the first edition, this textbook takes a 'how, why, what' approach to financial accounting, interwoven in each chapter. From chapter one, students understand how financial information is prepared and presented, why it is prepared and presented in this way, and what the resulting financial information means for users. Designed for students taking a step beyond their introductory financial accounting training, the textbook equips them with all the key tools they will require when they enter professional practice. Reflective of the latest International Financial Reporting Standards (IFRS) and International Accounting Standards (IAS), this textbook delivers concise, clear explanations of all the key issues in accounting standards that students need to know. Content maps to professional accounting body syllabi, making this the perfect choice for accounting courses which offer exemptions. Chapters are rich with 3 types of examples to enhance understanding:

- Illustrative examples of real-world situations;
- Worked examples demonstrating the calculation of figures required for financial statements;
- Extracts from company annual reports demonstrate how the theory relates to financial reporting in practice.

More engaging, more balanced, and more applied than other offerings, this is exactly the textbook your financial reporting students need! An extensive Online Resource Centre accompanies the textbook and includes: For students: DT

The fundamental values central to the Messier/Glover/Prawitt text include: student engagement, a systematic approach, and decision making. Student Engagement: The authors believe students are best served by acquiring a strong understanding of the basic concepts that underlie the audit process and how to apply those concepts to various audit and assurance services. The text is accessible to students through straightforward writing and the use of engaging, relevant real-world examples, illustrations, and analogies. The text explicitly encourages students to “stop and think” at important points in the text to help them apply principles covered and also helps students see the application of concepts in a practical setting through “practice insight” boxes. A Systematic Approach: The authors first introduce the three underlying concepts of audit risk, materiality, and evidence, then follow with a discussion of audit planning, the assessment of control risk, and a discussion of the nature, timing, and extent of evidence necessary to reach the appropriate level of detection risk. These concepts are then applied to each major business process and related account balances using a risk-based approach, (in following with the new standards adopted by the various auditing boards). Decision Making: Since much of auditing practice involves the application of auditor judgment, the authors focus on critical judgments and decision-making processes. If a student understands these basic concepts and how to apply them to an audit engagement, he or she will be more effective in today’s dynamic audit

Many students have learned about the theories of organization, not by reading the original works, but by reading discussions of theories in textbooks. This sets the theories in context and provides some useful and important information, but those who take this approach to learning fail to see the more complete underlying theoretical structures, which are set forth clearly in Henry Tosi's *Theories of Organization*.

Held captive by a sadistic paedophile, Anna was subjected to despicable levels of sexual abuse and torture. The unrelenting violence and degradation resulted in numerous miscarriages, and the birth of four babies... each one stolen away from Anna at birth.
