Discusses the cultural and social effect that the railway had on nineteenth century society in Great Britain

The railway was one of the principal Victorian spaces of reading. This book spotlights one of the leading audience demographics in this late-Victorian market: the newly empowered readers of the expanding middle class. The transactions in which late-Victorian readers acquired the books read whilst travelling are reconstructed by exploring the leading determinants of consumers' purchasing choices at the railway station bookstalls selling books intended for reading in this zone. This exploration concentrates on the impact of forces like the input of the staff running the bookstalls and the commercial environment in which consumers made their purchases. At the center of this study is a leading (and still relatively under-examined) genre of Victorian print culture circulating in this reading space- the series. Rooney examines three leading examples of late-Victorian series, which sought to satisfy railway passengers' need for literary reading matter. Many of the period's principal authors and literary genres featured in their lists. Each venture is representative of one of the three main pricing tiers of series publishing. Employing an eclectic methodological framework combining cultural studies and book history approaches with concepts from the new humanities, the reading experiences furnished by the light fiction of these series are reconstructed. This study reflects the recent growth in scholarship on historical readership, the expansion in the canon of Victorian popular literature, and the broader material turn in nineteenth-century studies.

This book hopes to explore the experiences of these pioneer railway travellers, from the first railway stations and railway carriages to the hazards of the journey itself.

First published in 2005. Routledge is an imprint of Taylor & Francis, an informa company.

The accomplishments and initiatives, both social and economic, of Edward Watkin are almost too many to relate. Though generally known for his large-scale railway projects, becoming chairman of nine different British railway companies as well as developing railways in Canada, the USA, Greece, India and the Belgian Congo, he was also responsible for a stream of remarkable projects in the nineteenth century which helped shape people's lives inside and outside Britain. As well as holding senior positions with the London and North Western Railway, the Worcester and Hereford Railway and the Manchester, Sheffield & Lincolnshire Railway, Watkin became president of the Grand Trunk Railway of Canada. He was also director of the New York, Lake Erie and Western Railways, as well as the Athens-Piraeus Railway. Watkin was also the driving force in the creation of the Manchester, Sheffield and

Lincolnshire Railway's 'London Extension' - the Great Central Main Line down to Marylebone in London. This, though, was only one part of his great ambition to have a high-speed rail link from Manchester to Paris and ultimately to India. This, of course, involved the construction of a Channel tunnel. Work on this began on both sides of the Channel in 1880 but had to be abandoned due to the fear of invasion from the Continent. He also purchased an area of Wembley Park, serviced by an extension of his Metropolitan Railway. He developed the park into a pleasure and events destination for urban Londoners, which later became the site of Wembley Stadium. It was also the site of another of Watkin's enterprises, the 'Great Tower in London' which was designed to be higher than the Eiffel Tower but was never completed. Little, though, is known about Watkin's personal life, which is explored here through the surviving diaries he kept. The author, who is the chair of The Watkin Society, which aims to promote Watkin's life and achievements, has delved into the mind of one of the nineteenth century's outstanding individuals.
